each track in the event. The algorithm uses tracking information for the ring centers and then examines hypotheses for several different particle types for each track. For example, track 5, with momentum of 180 GeV/c, has been identified as a proton with likelihood more than 100 times that for being a pion, kaon or heavier mass particle.

Figure 3 demonstrates the power of good particle identification, showing the

Subsystem Concerns and Issues

- FEU60 ownership ($$)
- FEU60 wavelength shifter condition
- Readout system status
- Partial ring reconstruction
- New gas choice
- HV system status
- LV system status
- Gas filling system status & new gas
- Gas monitoring systems
- Gas seal
- LED pulsing system
- Temperature control system
- Mirror alignment
- Spares
- Epicure monitoring readout
- Staging area?
